### Bharatiya Vidya Bhavan's

# SARDAR PATEL COLLEGE OF ENGINEERING

218/22

(Government Aided Autonomous Institute) Munshi Nagar, Andheri (W) Mumbai – 400058

### End Semester Direct Second Year – Re-Examinations August 2022

Program: B. Tech. Civil Engineering Sum 19

Duration: 3hrs.

Course Code: PE-BTC404 Maximum Points: 100

Semester: IV

Course Name: Surveying & Geomatics

Notes:

1. There are TOTAL SEVEN MAIN questions, each of 20 points.

2. QUESTION 1 is COMPULSORY.

3. From the remaining SIX Questions Solve ANY FOUR.

4. Assume suitable data, wherever necessary and State it clearly.

5. Write answer to each question on a new page.

 Answers to be accompanied with appropriate sketches/facts & figures/table or chart/graph/diagram/flowchart wherever necessary or required.

Q.No.	Questions	Points	co	BL	PI
1.	Answer the following: (2 marks each)		-		<b> </b>
	<ol> <li>Distinguish between horizontal curve and vertical curves.</li> <li>Define Triangulation and Trilateration</li> <li>Distinguish between aerial remote sensing and space remote sensing</li> <li>Define super-elevation and sight distance</li> <li>Define Photo/Image Interpretation</li> <li>Focal length and photo scale in aerial photographs</li> <li>Total station and EDM</li> <li>State the basic principle of Global positioning system</li> <li>Give the difference between theodolite and tacheometer</li> </ol>	20	1,2,3	1,4	1.1.1
	10. Define: Horizontal and vertical control in setting out works				
2.A	Design the transition curve for a railway line with rail gauge of 1.5m: vehicle design speed (1), transition curve length (2), spiral angle (1), shift of the transition curve (1). Following data is available: Super-elevation – 15cm, radius of circular curve – 300m, rate of change of radial acceleration – 0.3m/s <sup>3</sup>	5			
2.B	<ol> <li>State various methods of setting out horizontal curve (2).         Explain the method in detail with proper sketch (5).</li> <li>With proper sketch, explain the concept of 'Sight distance' (3).</li> <li>Explain, with the help of a neat sketch, the 'Tangent Correction method' of setting out Vertical curve. (5)</li> </ol>	15			
3.A	Define 'Figure of Triangulation' (3). State different figures adopted for triangulation with proper sketches (6). Explain the criteria for carrying out triangulation survey (6).	15	-		
3.B	Differentiate between Vertical, Tilted and Oblique photographs with proper sketches (5).	5			

# SARDAR PATEL COLLEGE OF ENGINEERING

(Government Aided Autonomous Institute) Munshi Nagar, Andheri (W) Mumbai – 400058

### End Semester Direct Second Year – Re-Examinations August 2022

4	<ol> <li>State various elements of aerial photo interpretation (2). Explain any two elements with proper examples (6).</li> <li>Aerial photographs were taken with a camera having a focal length of 160mm, the average elevation of the ground in the photograph was 180m. Find the scale of the map if the flying height was 3000m(2) and the flying height required to have a photo scale of 1 in 6000 (2).</li> <li>Explain in short the working of EDM, with a neat sketch (8)</li> </ol>	8 4 8	11		
5.	<ol> <li>Draw a neat sketch and show the range line, sounding points and shore line (2). Give the requirements for planning the sounding points (3).</li> <li>With neat and labelled sketches, the location of sounding stations by means of Intersecting ranges (5)</li> <li>Give the difference between Registering and Nonregistering (Self-registering) tide gauges (2). Explain the working of the registering (recording) tide gauge (3)</li> <li>Give the types of self-registering gauges (2) and explain any one in detail (3).</li> </ol>	5 5 5 5			
6.A	1. Given the data as shown here:    Inst   Staf   Lin   Bearin   Vertica     stn   fstn   e   g   langle     O   A   OA   84°36'   3°30'   1.35, 2.10, 2.85     O   B   OB   142°24'   2°45'   1.955, 2.875, 3.765     Find the distance between stations A & B and the gradient between stations A & B. (Staff held normal at both the stations)	10			
6.B	Explain with neat sketches the difference between primary, secondary and tertiary triangulation methods.	10		-	
7.A	Write a note on:  2. Importance of setting out works (5).  Methods of locating a new structure w.r.t the permanent structure (5).	10			
7.B	1. Derive the stadia equation for a line of sight inclined to the staff intercept (5). State and explain the errors in stadia measurement in a teacheometric survey (5).	10			

---- The End -----

#### Re-Examinations August 2022 (DSE)

(2021-22)

Program: S.Y. B. TECH LUM

Course Code: PC-BTC-405

Course Name: HYDRAULIC ENGINEERING

Duration: 03 Hrs.

Maximum Points: 100

Semester: IV

Notes:

23/8/22

• Attempt **any five** questions.

• Answer to all sub questions should be grouped together.

• Figure to right indicates full marks.

• Assume suitable data wherever necessary and state it clearly.

Q. No.	Questions	Points	CO	BL	PI
1	(a) Explain the significance of dimensional analysis in experimental studies with special emphasis in hydraulic engineering.	10	4	2	1.3.1
	(b) Explain Buckingham's-π method of dimensional analysis.	10	4	4	2.1.2
	(a) Explain with neat sketches HGL and TEL for pipes in parallel and pipes in series.	10	1	2	1.3.1
2	(b) What do you mean by Siphon? Explain its working with neat sketches.	10	1	4	2.1.2
	(a) What is Impulse momentum principle? Explain its applications in hydraulic engineering with suitable examples.	10	1	4	1.3.1
3	(b) Show that the efficiency of a free jet striking normally on a series of flat plates mounted on the periphery of a wheel can never exceeds 50%.	10	1	5	2.3.1
	(a). Explain working of hydraulic turbine with a neat sketch and define hydraulic efficiency, mechanical efficiency and overall efficiency of a hydraulic turbine	10	2	2	2.1.2
4	(b) A Pelton wheel has a mean bucket speed of 10 meter/sec with a jet of water flowing at a rate of 0.85 cum/sec. under a head of 40 meter. The bucket deflects the jet through an angle of 165°. Assuming coefficient of velocity as 0.98, Calculate power and overall efficiency of turbine	10	2	4	2.3.1
E	(a) Explain:  (i) Priming of a centrifugal pump; and  (ii) Pumps in series and parallel	10	2	2	2.1.2
5	(b) Explain: performance characteristics curves of hydraulic turbines; also discuss the term specific speed of turbine.	10	2	4	3.1.6
6	(a) Derive the condition for most economical triangular channel section to carry maximum discharge.	10	2	2	2.1.2
	(b) For a trapezoidal channel with bottom width 30 meter and side slopes 2H: 1V, Manning's constant (N) is 0.018 and bottom slope is	10	2	4	3.4.2

Semester: IV

Program: B. Tech Civil

#### Munshi Nagar Andheri (W) Mumbai 400058

#### Reexam DSY

August 2022

Max. Marks: 100

S.Y. B. Tech Civil Lem 1

Class: Name of the Course: Environmental Engineering I

Course Code: PC-BTC407

Instructions:

Question one is compulsory

Attempt any four of remaining six questions

Draw neat sketches/diagrams wherever required

Assume suitable data if necessary and state them clearly

Figure on right indicate maximum points for the given question, course outcomes attained,

Bloom's Level and Performance Indicators

Answer the questions	(20)	CO	BL	PI
(i) Explain the need of filtration in water treatment.	(10)	1,2	2	1.2.1
(ii) Explain process of disinfection and its requirement.				
(iii) Give advantages of tube settlers				
(iv) Explain the importance of coagulant aided sedimentation				
(v) Explain color and odor removal				
Draw components of water supply scheme and Explain factors affecting need of water supply scheme	(10)	1,2	2	3.2.1
	(20)			
Draw the flowsheet of conventional surface water treatment plant in detail.  Explain in detail the function of each unit. The reductions of turbidity, salts	(10)	1,2,3	3,4	3.3.1
Explain per capita demand. Explain factors affecting percapita demand.	(10)	1,2	3,4	5.3.1
Answer the following questions				
Explain population forecasting and why it is required for designing the water supply scheme. A town has a population of 8,00,000 in 2010. The water supply scheme is to be developed for the area for the year 2040. The past census records are provided in table 1. Calculate the population for which water supply system is to be designed using any two appropriate methods for newly developing city.	(10)	1-3	4-5	3.4.2
	(ii) Explain the need of filtration in water treatment.  (iii) Explain process of disinfection and its requirement.
